

The world potential theory (WPT): Publishing attempts since 2008

Until now I made five attempts without success to publish my new static cosmology:

1) 11 December 2008: I sent a paper in French to the Comptes rendus Physique. More information can be found in

www.wolff.ch/astro/Combes_d.pdf (German) or in
www.wolff.ch/astro/Combes_f.pdf (French).

2) 3 March 2009: I asked SCNAT (Swiss Academy of Sciences) for help for endorsing in arXiv. More information can be found in
www.wolff.ch/astro/Replik_d.pdf (German).

3) 6 March 2012: I sent an article to the Annalen der Physik. An English translation of a summary of the correspondence with the editor you find in

www.wolff.ch/astro/AP_Briefwechsel_en.pdf

4) 19 March 2012: I made an attempt to publish in arXiv with the help of a research institute. The rejection answer is very interesting, because it shows the problems and limits of the present-day peer-review system from a side which must know all this. The English translation of the anonymized and abridged rejection you find in

www.wolff.ch/astro/Inst_A_e.pdf

5) Since the 27 September 2013 until now I asked three possible endorsers for arXiv. Two of them wrote, that they are not allowed/able to endorse; one of the two wrote explicitly that this can only do the Cornell University and that he does not know their rules for endorsing. Only the first one wrote, that he could not be endorser for my article, because he could not agree about the details of my work, without giving any reason or example; but I'm very sure, that he does not know the details of my work and besides I'm very convinced, that he only translated the decision of Cornell University into Spanish. All this you find in

www.wolff.ch/astro/arXiv_Anfragen.pdf (German and partly Spanish)
