

E-Postverkehr mit arXiv seit Sept. 2012

Die neueste „Antwort“ vom 06.02.2014 22:01 ist keine, mindestens keine auf die von mir gestellte Frage. Wer sinngemäss lesen kann, weiss nun über arXiv definitiv Bescheid!

Dear Peter Wolff,

Endorsement is required for all users who are not submitting from within an academic institution. For more information see:

<http://arxiv.org/help/endorsement>

Dear arXiv-moderation,

Nothing of what you wrote, was new for me with the exception, that endorsing is necessary also for testing purposes, but now I know, that this explanation about endorsing is wrong:

Meanwhile I asked three possible endorsers. Two of them wrote, that they are not allowed/able to endorse; one wrote explicitly that this can only do the Cornell University and that he does not know their rules for endorsing. Only the first one wrote, that he could not be endorser for my article, because he could not agree with the details of my work, without giving any reason or example; but I'm very sure, that he does not know the details of my work. I'm very convinced, that he only translated the decision of Cornell University into Spanish.

Kind regards

Peter Wolff

Dear Peter Wolff,

You will need to seek endorsement before our system will allow you to upload your source files to test. Please seek endorsement first and then you can test your source package.

Searching for an endorser on arXiv may benefit you by allowing you to increase your social network within your field of interest. To find an endorser, click on a recent submission in your field, and at the bottom of the abstract page, there is a link which states: "Which authors of this paper are endorsers?" Click this link, and you will be given a list of which authors are possible endorsers of your work.

You can find the email addresses of the authors on the abstract page at the top of the submission history section. It is often a good idea to send potential endorsers a copy of your proposed submission along with the endorsement request. Please note, however, that it is inappropriate to email large numbers of potential endorsers at once,

or to repeatedly email the same endorser with a request for endorsement.

Dear arXiv admin,

How is it possible to test the submission process without endorsement and of course without really submitting the article? The reason for my request: A prominent physicist (who is not registered as endorser) promised me to submit an article for me to arXiv, but only after I would have tested the full submission process and checked (and corrected in the case of errors) carefully both the title/abstract (metadata) and the processed files.

Kind regards

Peter Wolff

Dear Peter Wolff,

There seemed to have been a minor issue with your account since 2004, which I've corrected. You'll need to seek endorsement before you'll be permitted to submit. Please see:

<http://arxiv.org/help/endorsement>

and view the on-screen help if you run into trouble.

Keyword: "Dear arxiv,"

Dear arxiv,

On my user page (account: wolff#1) there is no field "start new submission". What is the reason? What I have to do to be able to submit an article?

Kind regards

Peter Wolff
